Length	14.6 inches
Weight	17.7 oz.
M.O.A.	.25 inch @ 100 yds.
Dials	finger adjustable
Country of Origin	Philippines

These two riflescopes are similar. However, it has been our experience that some shooters prefer the traditional **duplex** reticle over the busy **military dot**. Though the Mil Dot has some advantage in the field to help in hold over/under and windage adjustments without re-zeroing, some amount of learning is required to be proficient. The duplex has 5 points on the reticle, the Mil Dot has 17 points. Shooter preference comes to play here for choice as the difference in price is about \$10.00. For clarity of optics (close to crystal), durability (we've had no returns in 2.5 years), reticle appearance (not too thick, not too thin), and price point, these two Bushnell Legend air rifle scopes are great. We like'em! We recommend them.

4-12X40 AO.....\$195.00  
5-15X40 AO.....\$204.50
